S.B. Jain Institute of Technology. & Research

Diploma in ETC 2009 - 2011
Pryadarshani polytechnic Nagpur

Why We Start Asterisc?

The real fact why students did not get a job in companies in India

About millions of students are jobless, because of the pandemic conditions all over the world according to a March 2020 report of TOI. It is believed that this number is underreported and doesn't undertake the rural unemployment and those who aren't actively looking for jobs. There are millions of students who, not getting the right job, have settled for very menial work where they are getting a salary that's nearly negligent. So, in short, the employment scenario in India is bad. And what's make it even worse is the fact that the Government is doing so less to fix this problem. Unemployment isn't even on their priority list that's topped with Hindu-Muslim politics.

Now coming to our exact question, in India, we don't have a good ecosystem that encourages entrepreneurship. And since that's not the case, we don't have an adequate amount of employment opportunities in the private/government sector. So, we don't have many jobs in the country for 1 million Indians reaching employable age EVERY MONTH. Also, whatever jobs are available or are emerging, they require unique skills that many job seekers don't necessarily have. This is why millions and millions are unemployed in our country.

Hopefully, in the coming days, things will improve and there would be sufficient employment opportunities. But sadly, Students who are completing their education in the covid19 batch there has no practical knowledge.
